

XPECTRA INTELECTRA

LEADING COMPANY IN THE DEVELOPMENT OF
RISK MANAGEMENT
SOFTWARE PLATFORM
FOR PHYSICAL SECURITY MONITORING
CENTERS

XPECTRA offers **netMATRIX**, innovative operation solution and management of large physical security infrastructures.

The most advanced platform for physical security management

netMATRIX is a platform that enables centralized and integrated remote management of security systems that also has the ability to control the business through a set of planning tools.

The system correlates information from all the operated infrastructure, integrating hardware and software regardless of brand, model or technology. The core processes all information allowing to manage, manage and support decision-making.

netMATRIX offers an independent service for corporate risk management that embraces two broad pillars. The corporate security infrastructure and management and service processes that support it.

Comprehensive management system:

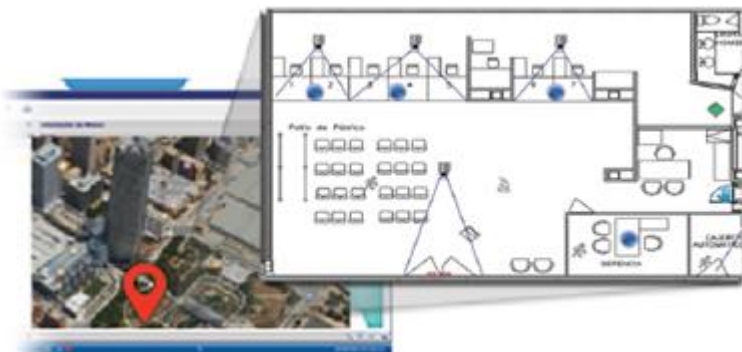

- Combine and relate CCTV systems, access, alarm, fire and automation under one interface.

Locality Management:

- Interactive navigation maps.
- Intelligent event queue management.
- Priority management
- Reaction schedule(S.O.P.)

Video Integral management :

- File management
- Control the sources of information in each system, correlate events, and simply export research cases.

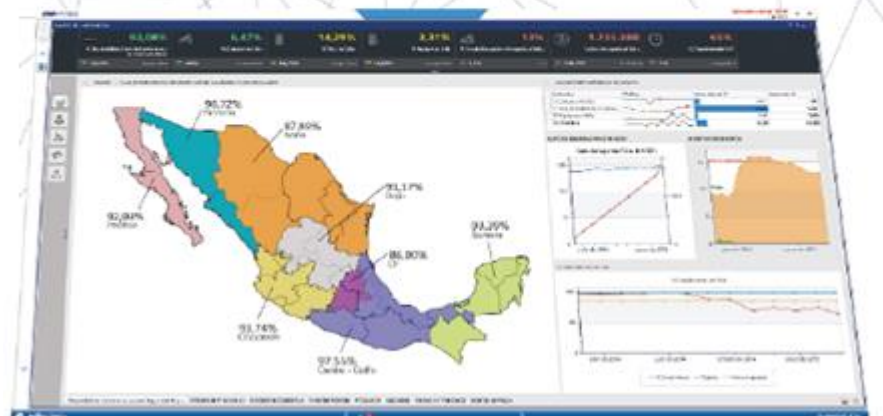

Personal control:

- Management failures, services, assets and their technical staff comprehensively
- Using mobile apps, take control from anywhere.

Indicator management:

- Gain control of your organization by creating indicators of your systems and processes
- Increase your computing power with OLAP technology-based system.
- Build custom dashboards.
- Navigate graphically and increase your decision-making capacity.

Gain control of your security management through technology that only netMATRIX can offer you
